P

Basic Testing Plan

1. Create Dungeon object, with desired size (Rows x Columns), assign treasures to whatever percentage you like.
 - a. Check whether the correct sized dungeon is created.
 - b. Check whether total treasures match (with tolerance) the amount of percentage of setting up treasures given to it .
 - c. Print the state of dungeon.
2. Create Player.
 - a. Check whether the player is created as per the given params/conditions.
3. Create a Cave and a Tunnel.
 - a. Check for whether they can hold treasure or not.
 - b. Check whether they can hold monster or not.
 - c. Check whether they can hold weapons or not.

4. Add player to Dungeon.
 - a. Check whether it can look for treasure or not.
 - b. Check if treasure is there, it can pick it up or not.
 - c. Check for whether dungeon can move player or not.
5. Create a Treasure.
 - a. Check whether it only allows values from enum to accepted.
6. Create Monster.
 - a. Check whether the monster can kill player or not.
 - b. Check whether player can slay the monster or not.
 - c. Check whether monster is reporting alive/dead status.
7. Create Controller.
 - a. Check whether it is taking right input and passing right output.
 - b. Check whether it is terminating the game correctly or not.

Further Testing can be done as soon as any condition, expression, functionality is added whilst implementation of the requirements.
